Re: Proceeding 03-104  
Date 06-12-03

Dear Sirs/Madams,

This is in reply to the Notice of Inquiry # 03-104

After reading, listening and considering the facts about Broadband over Power Lines I have decided that it would not be in the best interest of the citizens of the United States to allow this technology to be used.

Many people more qualified in a technical sense have already given you the "Figures and how it Works" comments. I have decided that the experts are correct in saying "Do not let this happen under the existing Part 15 Regulations".

I feel that politics and well monied industrial lobbyist arguments should be swept aside and instead we should use the true test of "Have I put the best interest of the people / Nation first"? The outcome should not be decided because of some cleaver wordsmith's use of a phrase or definition so as to "legally" gain the upper hand at the expense of what's morally fair and right. This principal of "Putting the People/Nation First" is what sets us apart from the other nations of the world and has made us great and will continue to do so, so long as we do not lose sight of this principal.

I respectfully submit this comment for your consideration,

James H. Kidd Jr.
